## EXPERTISE

## EDUCATION

Self taught from the internet.

## LANGUAGES

English Mother Tongue  
Arabic Native Speaker

## EXPERIENCE

- Groovy Medspa Clinics Website Redesign**  
February - March 2020 Unsolicited Redesign  
Redesigned their website to be a more intuitive, user-friendly, elegant design to showcase their beauty services and allow customers to book appointments online.  
After researching and interviewing their users, I reorganized their navigation bar to be simpler, more user-centered and thus easier to understand and navigate.
- Che Yen Model Portfolio Website (Design & Development)**  
November 2019 - January 2020 Contract Job  
Created a model portfolio website for Che Yen, an American-Taiwanese model.  
I used GatsbyJS for this project, the website is pre-built and hosted on the edge before the user even types in a URL. This makes it so that you have blazing fast page load times and on slower connections and mobile phones, the experience is still fast. That gives the company a huge advantage if their site loads on a slow connection when their competitors' sites don't.
- Salon Landing Page Website (Development)**  
November 2019 - December 2019 Contract Job  
Created a landing page website that would let them fill out forms and submit it to a well-known source, Dr. Mona herself (the client) and chosen colleagues.  
I knew I had to build a lightning-fast website for user experience, user retention, and SEO. I had just learned about a new stack called JAM stack, everyone was talking about how hot it is and how fast static site generators are, so I thought it'd be perfect for what I needed.
- Nile Group Website (Design & Development)**  
September 2018 - October 2018 Contract Job  
Nile Group is a distribution and trading agency that needed a website for their B2B business. I had to learn Wordpress, create content, organize it and display it on the website within a month. This gave me a lot of experience with using wordpress, templates, and a private domain using Bluehost.
